

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to my teachers and institution for providing valuable guidance and encouragement during the preparation of this project synopsis. Their support helped me understand the importance of efficient, responsible, and sustainable software development.

I am also thankful to my parents, family members, and friends for their continuous support and motivation. Their encouragement helped me complete this project work with interest and dedication.

Thank you to everyone who directly or indirectly helped me complete this project.

Synopsis

Title of the project:-

EcoDev: Green Code Analyzer and Laptop Energy Saver

Members of the project: - Name:- Vishal Radheshyam Yadav

Roll no:- 2619064

Purpose of the project:-

To analyze code complexity, runtime, and memory use in JavaScript, TypeScript, Python, Go, and C programs.

To give practical recommendations based on the developer's priority, such as speed, limited memory, reliability, scalability, security, and bug-resistant design.

To promote green computing by reducing unnecessary CPU work, memory movement, repeated processing, and background activity.

To forecast laptop and resource usage so developers can identify rising workload, capacity, and energy demand early.

To encourage simple laptop energy-saving habits such as automatic screen-off, lower brightness, battery saver, fewer background applications, and keyboard-backlight control.

To keep analysis local by default and provide a future path for a permission-based desktop companion and VS Code integration without uploading source code.
